A DATA ANALYTICS COMPETITION

# Round 1

## Problem Statement

Basketball is a data-driven sport where insights into team performance, player contributions, and evolving game trends enhance both analysis and fan engagement. With rich NBA data available across multiple seasons, effective visualization is crucial to transform raw statistics into meaningful stories. In this challenge, participants will analyze a comprehensive NBA dataset spanning from the 2004 season to the latest update, covering games, players, teams, and league standings. The dataset includes game-level outcomes, player-wise performance statistics, team metadata, and conference-wise rankings. Participants are required to design an interactive and visually engaging dashboard that allows users to intuitively explore and compare NBA insights across seasons and teams.

### Key Focus Areas

- Season-wise and team-wise scoring trends
- Player performance and efficiency analysis
- Team consistency and performance patterns
- Home vs Away performance comparison
- Eastern vs Western Conference dynamics
- 

The final dashboard should enable fans, analysts, and basketball enthusiasts to explore data seamlessly and understand how the NBA has evolved over time through clear storytelling and impactful visualizations.

## **Your Task**

Participants must build an interactive NBA analytics dashboard using Power BI, Tableau, or Python.

Dashboard Must Include

- Trends: Season-wise and game-wise scoring & performance trends
- Team & Conference Analysis: Team comparisons and East vs West insights
- Player Insights: Key player stats, consistency, standout performances
- Rankings: Team rankings and win–loss patterns over time
- Interactivity: Filters by season, team, and player with brief insights

## **Evaluation Criteria**

- Originality of Solution
- Insights and Accuracy
- Visualization Clarity
- Interactivity
- Design and Aesthetics

## **Submission Guidelines**

- Team Size: 1–3 participants per team
- Tools Allowed: Power BI / Tableau / Python
- Accepted Formats: zip file containing any of the following formats: .pbix / .twb / .twbx / .ipynb / .html
- Submission Deadline: 2 January, 11:59 AM
- Dashboard Requirement: Must be interactive, functional, and based on the provided NBA dataset

# All the Best!
